

Ch: 6 Measurement

16.12.2025

Topics -

- Measurement and its need
- Measurement of length
- Measurement of mass
- Measurement of capacity
- Measurement of time
- Measurement of temperature

Key words -

1. ~~Measurement~~ - The process of finding out the size or the quantity of something

2. Unit - A fixed quantity that is used as a standard of measurement

3. Length - The size or measure

Q.6 Short Question Answer

1. Define a unit:

Ans A unit is defined as a fixed quantity used as a standard of measurement.

2. What is length?

Ans Length is the size or measure of how long an object is.

3. When we buy potatoes, what is standard unit used to weigh potatoes?

Ans Kg

4. What is temperature? Which instrument is used to measure temperature?

Ans Temperature is a measure of how cold or hot an object is. Temperature is measured using a thermometer.

Q. H. Long answer questions

1. Give four examples of measurement from our day-to-day life.

Ans Examples of measurement in our day-to-day life:-

- We can measure the length of an object, say a table, using a measuring tape.
- A fruit vendor measures the weight of fruits with the help of a weighing machine.
- We can measure time using wall clock or a wristwatch.
- We can measure the quantity of medicine using medicine bottle cap.

2. Will the length of your study table be the same if you or your parents measure it using your respective foot span? Based on this, explain why do we need standard units from measuring things.

Ans These measures did not give

correct measurements because different people have different measures of their body parts. Thus, they felt a need to have a fixed unit for measuring different things. These fixed units are called standard units.

3. Suppose you bought coloured pens for your new assignment. But the pens do not fit into your stationery box. Write the steps you will follow to measure the length of the coloured pens and the stationery box.

Ans One end of the pencil is kept at 0 mark on the ruler. Suppose the other end of the pencil is 9 cm mark, then the length of the pencil is 9 cm. Likewise if the pencil tip reaches up to 9 cm and 3 small divisions more on the ruler, then the length of the

pencil will be 9.3cm (9cm and 3mm)

Q. How does a vegetable vendor weigh the vegetables?

Ans. While selling fruits and vegetables, the vendor places the vegetables or fruits on one pan and puts the known weights on the other pan on the weighing balance. The mass of both the objects will not be same, until the needle of the weighing balance comes at the centre.

Q. Define capacity. Name any two standard units to measure capacity.

Ans. The capacity of a container is defined as the amount of liquid it can hold. The standard units for measuring capacity are litre (L) and millilitre (mL). Measuring cylinders and beakers are used to measure capacity.
