

TREE HOUSE HIGH SCHOOL

ICSE GR IV A.Y (2025-26)

SUB: Science

Date: 25.11.2025

Marks: 25

Name - _____ DIV - _____ Roll no - _____

- 1. Which of the following statements about particles in a solid is TRUE?**
 - A. They are far apart and move freely.
 - B. They are close together and only vibrate.
 - C. They keep changing their positions randomly.
 - D. They move faster than particles in gases.
- 2. Which change of state occurs when water vapour turns directly into tiny droplets on a cold surface?**
 - A. Freezing B. Melting C. Condensation D. Evaporation
- 3. Which property allows liquids to flow?**
 - A. Strong attraction between particles
 - B. Fixed shape
 - C. Particles loosely packed
 - D. No space between particles
- 4. Which of the following expands the MOST when heated?**
 - A. Solids B. Liquids C. Gases D. Metals
- 5. When camphor disappears on heating without becoming a liquid, the process is called:**
 - A. Melting B. Sublimation C. Condensation D. Solidification
- 6. Which state of matter has particles that move in all directions at very high speed?**
 - A. Solid B. Liquid C. Gas D. Plasma
- 7. Which of the following objects will change shape to fit its container?**
 - A. A stone B. A plastic ball C. Milk D. A pencil
- 8. Air is a gas because it:**
 - A. Has fixed volume
 - B. Can be held without a container
 - C. Fills all the space available
 - D. Has a definite shape
- 9. Which of these is an example of condensation in everyday life?**
 - A. Drying clothes in the sun
 - B. Ice melting into water

C. Water droplets forming on a cold glass

D. Water boiling to form steam

10. Which change of state requires heat?

A. Freezing B. Condensation C. Melting D. Solidification

11. Gases can be compressed easily because their particles:

A. Are tightly packed

B. Are arranged in neat rows

C. Have large spaces between them

D. Do not move

12. Which of these is NOT a property of liquids?

A. They have a fixed shape

B. They take the shape of the container

C. They can flow

D. They have a definite volume

13. When water freezes, its particles:

A. Move faster

B. Move farther apart

C. Become tightly packed

D. Break into gas particles

14. A substance changes from liquid to gas fastest when:

A. It is kept in a cold place

B. Its surface area is reduced

C. It is heated

D. It is placed in a closed bottle

15. Which of the following is NOT an example of evaporation?

A. Clothes drying

B. Water boiling to form steam

C. Puddle shrinking in sunlight

D. Perfume spreading in air

16. Which state of matter has a fixed volume but no fixed shape?

A. Solid B. Liquid C. Gas D. All three

17. Which change of state occurs during the formation of frost?

A. Solid to liquid B. Gas to solid C. Liquid to solid D. Gas to liquid

18. When steam touches a cold mirror, tiny water droplets appear. This is because:

- A. Steam evaporates B. Water freezes C. Steam condenses D. Water boils

19. What happens to the movement of particles when a substance is heated?

- A. They stop moving B. They move faster C. They move slower D. They remain fixed

20. Why does a balloon filled with air become bigger when kept in the sun?

- A. Air contracts B. Air expands on heating C. Air becomes a solid D. The balloon absorbs water

21. A liquid can be poured because:

- A. Its particles are very tightly packed
B. Its particles slide over each other
C. It has no particles
D. Its particles cannot move

22. Which of these processes converts a gas directly into a solid?

- A. Condensation B. Evaporation C. Sublimation D. Deposition

23. Which of these shows *no fixed volume*?

- A. Solid B. Liquid C. Gas D. Ice

24. Why does the smell of perfume spread quickly in a room?

- A. Liquids flow easily B. Gas particles move rapidly
C. Solids expand D. Perfume freezes in air

25. The level of water in a glass decreases slowly over days even in shade. This is due to:

- A. Freezing B. Melting C. Evaporation D. Condensation
