17

Our Environment - Pollution & Protection

Friday

* Hard words:-

1] Pollutants

12] Biodegradable

2] Ozone

13] Acid rain

3] Appliances

14] Organic farming

4] Asthma

15] Reuse

5] Chimneys

16] Reduce

6] Sewage

17] Recycle

7] Jaundice

8] Industrial

9] Poisonous

10] Decible

11] Loudspeakers

C.W
22/8/25

* Topics:-

- Causes, effects and prevention of pollution (air, water, noise and soil)
- Reduce, recycle and reuse
- Case studies of air and noise pollution

* New Words:-

Pollution : adding substances to the environment which are harmful

Pollutant : a harmful substance added to the environment.

Ozone : a poisonous gas with a strong smell.

Sewage : used water and waste produced by human bodies that are carried through special pipes.

Treat : to use a chemical substance or process to clean something.

Decible : used to measure the intensity (Strength) of sound.

Biodegradable : something that can be changed to a harmless natural state by the action of bacteria and will therefore not damage the environment.

Smog : air pollution that is a mixture of smoke and fog.

G.W
23/8/25

Notes -

* Pollution	Causes	Effects
1] Air Pollution.	1] Gases released from vehicles and factories.	1] Factories and industries make sure that gases released are purified.
	2] Smoke from burning.	2] A cleaner fuel should be used who burn coal or wood.
	3] Gases from home appliances.	3] We should reduce harmful gases from vehicles & appliances. CNG vehicles should be used.
	4] Garbage.	4] Planting more trees.

-Notes-

Pollution	Causes	Effects
2] Water Pollution	1] Industrial wastes from factories.	1] Factories must treat their water before releasing it.
	2] Oil spills in sea.	2] We must have good ways of cleaning up the spills and absorbing the oil from water.
	3] Sewage water.	3] Cities and villages must have a sewage treatment plan.
	4] Misuse by people.	4] Do not bathe and wash anything in rivers and ponds. Idols for festivals should be made of clay.

Wednes

3/8/2025

- Notes -

Pollution

Causes

Effects

3]

Noise

Pollution.

1] Cars and other vehicles constantly blowing their horns.

2] Sounds of moving vehicles like trains, aeroplanes and other vehicles.

3] Burning of crackers during Diwali.

1] Drivers of vehicles need to use the horn only when essential.

2] Safe zones need to be made around airports and other noisy sites.

3] Festivals can be celebrated in a beautiful and quiet manner. Loud firecrackers can be avoided.

-Notes-

Pollution	Causes	Effects.
4] Soil Pollution.	1] People throw away plastic and other such materials. 2] Waste from factories which has harmful chemical seeps into the soil. 3] Farmers use pesticides to kill insects or other crops.	1] People should stop using plastic and non biodegradable materials. 2] Wastes from factories has to be treated to remove all harmful materials before it is released. 3] Farmers need to use natural fertilizers and pesticides rather than dangerous chemicals.

E] Answer the following questions.

1] How do we cause pollution?

→ Pollution is caused due to air, water, noise and soil.

2] What is non-biodegradable waste?

→ Non-biodegradable waste is that waste which cannot be broken down to become a part of soil again. It remains as it is for hundreds of years in soil or water and can harm the environment.

3] What problems does an oil spill create?

→ When an oil spill occurs in an ocean or a sea, it harms the fish, other water creatures and sea birds.

4] What problems can more vehicles on the road create?

→ More vehicles on the road can lead to many problems. They can raise noise levels and also lead to air pollution due to fuel burning.

5] What damage can noise pollution do?

→ Noise pollution can cause hearing loss. Noise is measured in decibels and the safe level for our ears is below 85 decibels. If sound rises beyond this, then it can lead to serious problems in hearing. When people or animals consume these plants, those chemicals get transferred to their bodies which may cause harm.

6] What are the long-term effects of soil pollution?

→ When soil is polluted, it leads to long-term problems in the environment. If a plant grows on harmful chemicals, they carry these chemicals in them. When people or animals consume these plants, those chemicals get transformed to their body which may cause harm.

A. Picture Study:-

What do you see in the picture? Talk about all the reasons why this happened and what can we do to prevent it.

→ Dead fish, could be due to pollution in water.
We should stop throwing garbage in water.
