

Ch-		Date
5	The four domains of earth	28/07/2025
		Day - Monday

Topics

- 1) Hydrosphere
- 2) Atmosphere
- 3) Lithosphere
- 4) Biosphere

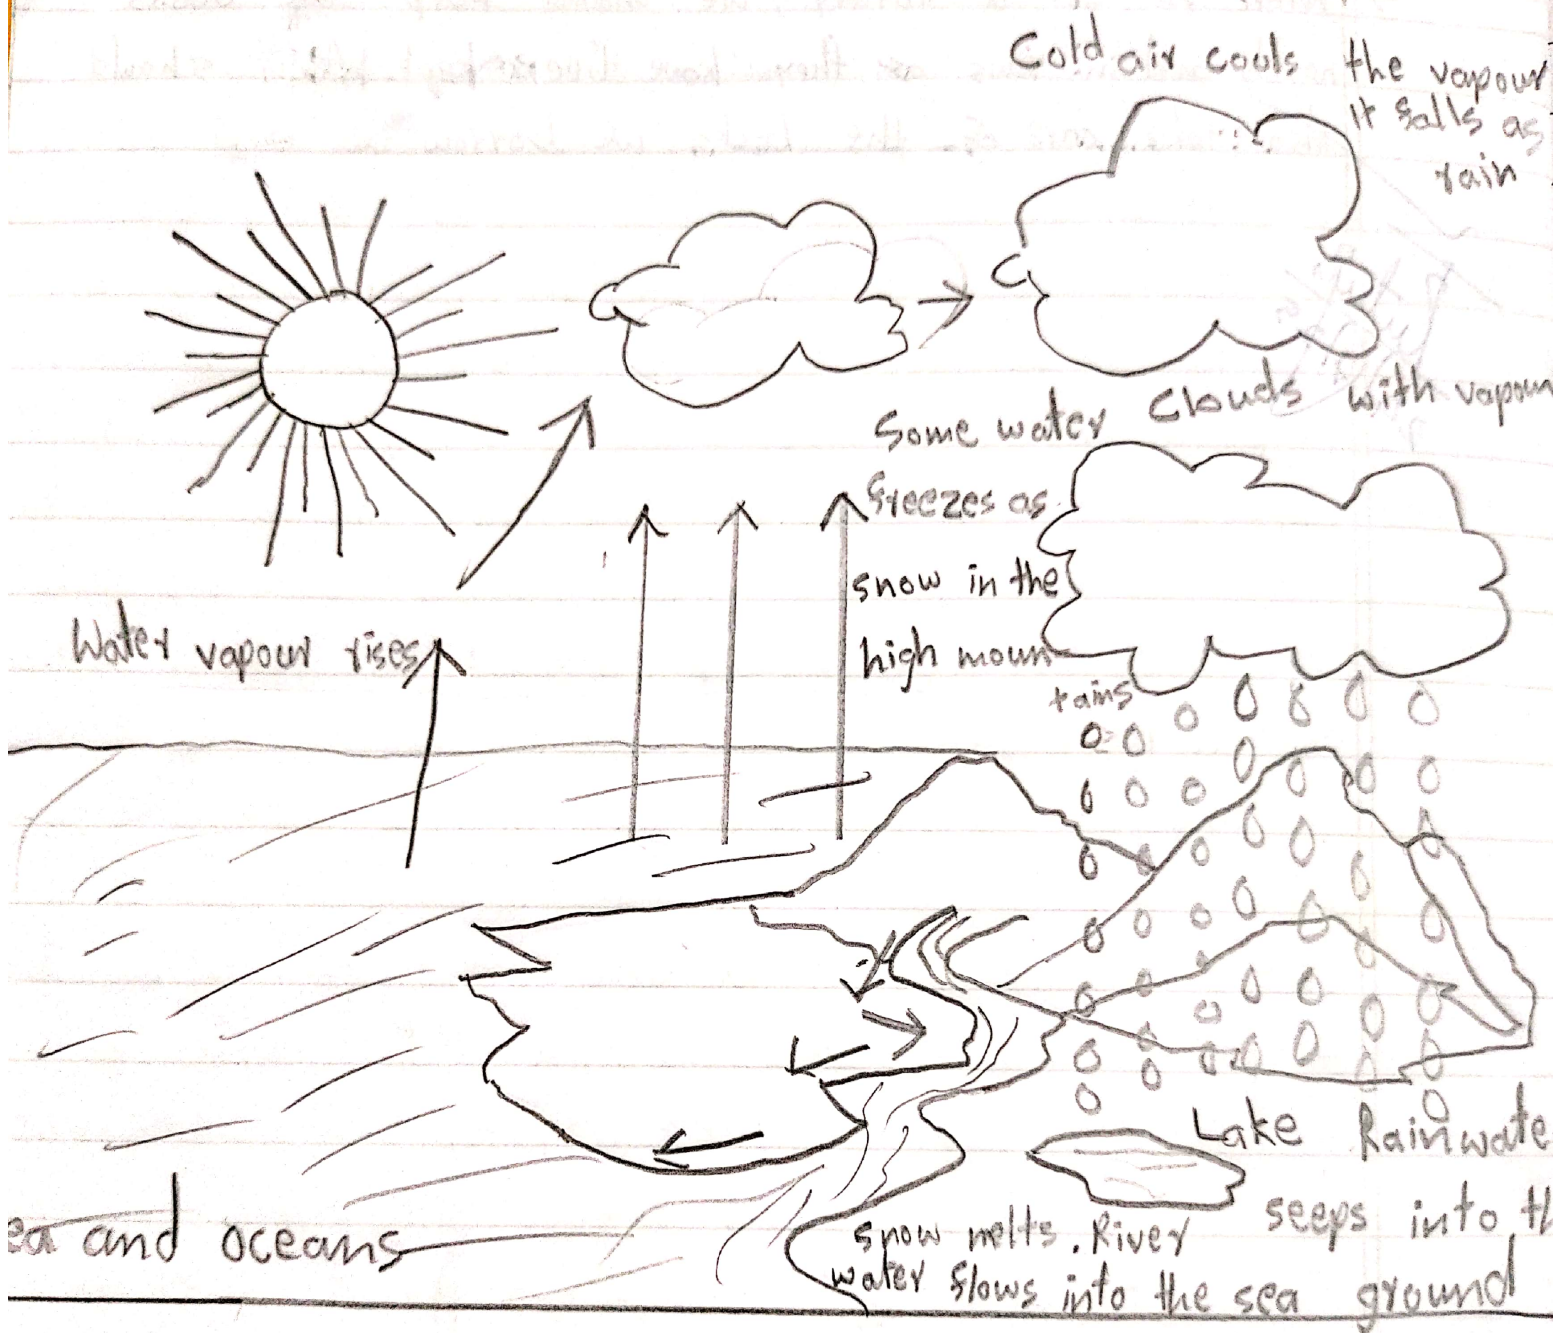

New words

- 1) Domain - a region of the earth that has its own special features
- 2) Evaporation - the process of a liquid changing or being changed into a gas
- 3) Condensation - drops of water that form on a cold surface when warm water vapour become cool
- 4) Precipitation - rain or snow that falls
- 5) Molten - melted
- 6) Habitat - the place where a particular type of animal or plant is normally found

Hard words

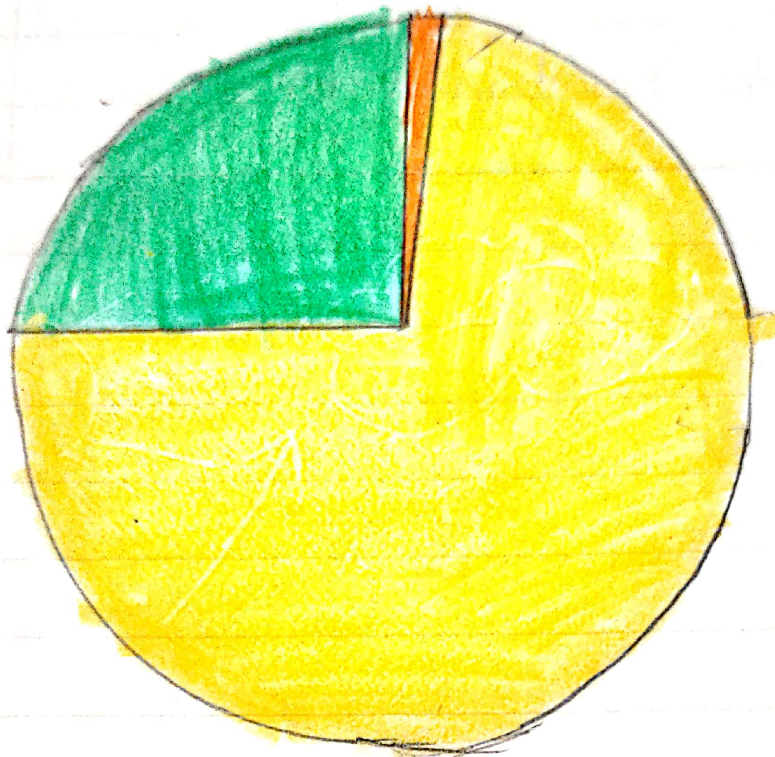

- 1) Domains
- 2) Evaporation
- 3) Condensation

Water cycle

1/08/2025

HW

Yellow - Nitrogen
Green - Oxygen
Orange - Other, including
water vapor and
carbon dioxide

- 4) lithosphere
- 5) biosphere
- 6) atmosphere
- 7) Hydrosphere
- 8) Precipitation
- 9) water cycle
- 10) nitrogen
- 11) composition
- 12) molten rock
- 13) habitat

* Water, air, land and living things that make up the four domains of earth.

A domain is the region that has its own special features.

The four main domains are:-

- 1) Hydrosphere
- 2) Atmosphere
- 3) Lithosphere
- 4) Biosphere

1) Hydrosphere - Most of the earth's surface is water. Water is formed in ~~have~~ three forms - liquid water, and snow and water vapour - the gaseous form of water.

2) Evaporation - When water is heated it turns into water

vapour

- 3) Condensation - When water vapour cools, it turns back into water
- 4) Precipitation - It is the process by which water falls from the cloud to the earth in the form of rain, snow or hail.
- 5) Lithosphere - It is the solid part of the earth which has three layers - the crust, mantle and core
 - 1) The crust is the outermost part, the surface which has water and rocks and the soil is formed when rocks break down over many hundreds of years
 - 2) The mantle is the next layer. Its upper part is hard rock
 - 3) The innermost layer of the earth the core. It is very hot and consists of molten rock which keeps moving the time.
- 6) Atmosphere - The earth is surrounded by the layer of air called the atmosphere. It is made up of many gases. Nitrogen is the most followed by oxygen other gases, water vapour and carbon dioxide form a very small part of the atmosphere.
The atmosphere blocks out harmful rays of sun and

let in rays of the sun and let in rays that are necessary for living things

7) Biosphere—The biosphere is the part of the earth's surface and atmosphere in which plants and animals can live. Living things, from the smallest ones that we cannot see to big plants and animals, have their own special type of environment in which they can live and grow. This is called their habitat. The earth has many, many different kinds of habitat. The great variety of life on earth exists in these different habitats.

Answer the following

Q1) Why is water on earth essential?

Ans 1 Water on earth is essential as living things cannot do without water to survive.

Q2) Give two ways in which the atmosphere is useful.

Ans 2 Two ways in which atmosphere is useful are -
It blocks out the harmful rays of the sun and let in rays that are necessary for living things. Atmosphere contains oxygen which is needed by people and animals survive.

Q3 How is the lithosphere useful? Write in two or three sentences.

Ans 3 The lithosphere is useful as many essential things such as iron and coal are found in the rocky layers of the earth. When rocks, that are a part of the crust, break down over hundreds of years, soil is formed. All plants grow in this soil.

Q4 Write a short paragraph to explain how the biosphere depends on the other three domains of the earth.

Ans 4 The biosphere is that part of the earth's surface and atmosphere in which plants and animals live. Every living thing lives in their own special type of environment in which they live and grow which is known as their habitat. The earth has different types of habitats.

Q5 Give three examples of habitats found on earth.

Ans 5 Three examples of habitats found on earth are underwater, jungle, and desert.

Picture study

Q1 What does this diagram show?

→ Water

Q2 Label the blocks in the diagram?
